One job that piques my interest in this job that I found on Indeed, which is the company, Burns & McDonnell that is looking for a computer science intern of technology consulting. This can be seen as a great opportunity to work with real-world companies and to gain experience for future jobs, especially this one that involves with working with teams and providing business strategies. From what I see in the description, a few of the main responsibilities of this intern is that to perform services that include the setup of applications, to develop clients' business processes and configure applications based on their business needs, being responsible for system set up, administration and maintenance, etc.

The very first thing that is important is to prepare a clean and neat resume. With the basic information first and later with the skills and experience. I didn't work that much in the past so there are only a few projects and working experience that is not related to this particular job that I'm interested in. I've heard that to include as little as possible about experiences that do not meet the needs of the position. But since this job requires to cooperation with teams and clients, I believe that my past working experience would help me to fits in this position, and adding that to the resume would enhance the possibility to get accepted. After preparing the resume, it would be better to look at their qualifications to see if I'm a good candidate for this position. The first one is the pursuit of a Bachelor's or Master's in Computer Science, which I'm qualified for this as becoming a senior in the next semester in Computer Science. The second is currently enrolled, and in good standing, in a post-secondary education program in a field related to the work done in the department. I'm not sure what this exactly means but I'm assuming that it means that it would be better if you had projects or is having a project that is working with the department of CS under the supervising of the professionals. This I didn't have a chance to participate in a project like this, but what I would do to prepare for this would be to look for any future projects that would be available to undergraduate from the department and see if I'm able to participate in any of those future programs. Similar things would be to have a prior internship and/or related consulting experience preferred or any actively involved in campus, community, or other volunteer activities or organizations. Like I previously stated, there are no other better chances to be prepared for this but to try to participate in as many events or activities in the future if possible. This position also requires excellent verbal and written communication skills and strong problem-solving and leadership skills. I'm not excellent in verbal communication skills but in order to prepare for this or any other future positions, I've been practicing every day to enhance my verbal and written communication skills by communicating with different people and understanding their needs in my current working environment. And since the starting of Zoom lecturing, problem-solving and leadership skills are also being practice as I tried to be more independent, and working in a team sometimes forces you to be the leader as some people does not do their work and in a way, it enhances my leadership skill. The other two requirements are that Basic knowledge and experience in Microsoft Office programs, including, Word, Excel, PowerPoint, and Outlook, and with a minimum of a 3.0 GPA, which I'm both qualified for. I have many working experiences of working with different clients and communicate with them to understand their needs and make them satisfiable with the product provided or service and this would be one of the main skill that I felt I'm qualified for.
